

Introduction

My name is Muhammad Ali and I am an Artificial Intelligence student. I am interested in Data Analytics and I am excited to learn data analysis tools and techniques during this internship.

What is Data Analytics?

Data Analytics is the process of collecting, cleaning, organizing, and analyzing data to find useful information and support better decision-making.

What Does a Data Analyst Do?

A Data Analyst:

- Collects data from different sources
- Cleans and organizes data
- Analyzes trends and patterns
- Creates reports and dashboards
- Helps businesses make data-driven decisions

Difference Between Data, Information, and Insight

Data

Raw facts and figures without context.

Example:

100, 150, 200

Information

Processed data that has meaning.

Example:

Sales were 100 units in January, 150 in February, and 200 in March.

Insight

A useful conclusion drawn from information.

Example:

Sales are increasing every month, so demand for the product is growing.

How Data Analytics Helps CoreTech Innovation

Data Analytics helps CoreTech Innovation by:

- Improving business decisions
- Understanding customer behavior
- Tracking project performance
- Identifying business opportunities
- Increasing efficiency and productivity

Tools Used in Data Analytics

Microsoft Excel

Used for data entry, cleaning, calculations, and analysis.

Google Sheets

Used for online data management and collaboration.

Power BI

Used for creating dashboards, reports, and visualizations.
